

## Key Changes

### In Basket Gets a Renovation

- In Basket has new features designed to improve communication
- Changes will include a new look for the Message list, Reply and Forward quick action functions, and a preview of how many messages are contained within the user's account
- Users can review and edit sticky notes while working within the In Basket space

## New Feature

### Order Sets Are Now in Haiku, Canto, and Rover on iOS Devices

- Now Haiku users can search for and open certain compatible Order Sets on iOS devices just as accessing single orders and panels
- New features enable users to quickly view favorites, select and open orders and move between sections

## New Workflow

### Route Encounters to Other Organizations Electronically from Chart Review

- Users can now select Outside Provider Messaging to send encounters electronically from Chart Review

### Access Handoff Anywhere Using Haiku or Rover (Inpatient Only)

- The Handoff activity is now available in Haiku and Rover and users can review documentation, document follow-ups and reminders, and view reports showing important clinical data alongside Handoff documentation
